

Test Cases	Pre Conditions	Expected Result	Actual Result	Post Condition	Pass/Fail	Test Owner
Verify that the game download page is displayed correctly						
Verify that the user can initiate a game download by clicking the download button						
Verify that the game download progress is displayed accurately						
Verify that the game download is completed successfully						
Verify that the game can be uninstalled and all necessary files are removed						
Verify that the game is stored securely and that the user's progress is saved						
Verify that the platform implements mechanisms to prevent game piracy and unautho						
Verify that the user can launch the game from the platform						
Verify that the game graphics are displayed correctly						
Verify that the game audio and music are played correctly						
Verify that the game controls are responsive						
Verify that the game runs smoothly without lag or glitches						
Verify that the game implements a settings system						
Verify that the game implements a leaderboard system						
Verify that the game implements anti-cheat measures						
Verify that the login and registration page is displayed correctly						
Verify that the user can enter and submit valid login credentials						
Verify that it displays an error message when required fields are left blank						
Verify that the user's account information is stored securely						
Verify that the platform supports social logins						
Verify that the platform implements best practices for login security						
Verify that it can detect and download new game updates						
Verify that the platform can install and apply game updates						
Verify that the platform can notify users of available updates						
Verify that the platform can schedule updates to occur during off-peak hours						
Verify that the platform implements proper data compatibility policies						
Verify that the platform and game are compatible with different OS						
Verify that the platform and game are compatible with different devices						
Verify that the platform and game are compatible with different screen resolutions						
Verify that the platform and game are compatible with different graphics						
Verify that the platform and game are compatible with different input devices						
Verify that the platform and game are compatible at different network speeds						
Verify that the platform and game are compatible with different browsers						
Verify that the platform and game are compatible with different hardware configurati						
Verify that the platform and game are compatible with different language settings						
Verify that the platform and game are compatible with different security settings						
Verify that the platform implements proper authentication methods						
Verify that the platform implements proper encryption methods						

Verify that the platform implements proper threat detection methods						
Verify that the platform implements proper access controls						
Verify that the platform implements proper security certifications						
Verify that the platform implements proper security audits						
Verify that the platform implements proper security risk management						
Verify that the platform can handle large data transfers						
Verify that the platform can handle fast response time						
Verify that the platform can handle large file transfers						
Verify that the platform can handle fast API response time						
Verify that the platform can handle fast images and video loadings						
Verify that the platform can handle fast data synchronization						
Verify that the user can successfully purchase in-game items						
Verify that users can purchase in-game items using multiple payment methods						
Verify that the platform correctly calculates the total cost of multiple in-game item purchases						
Verify that the user can receive the correct in-game items after purchase						
Verify that the platform correctly handles refunds and cancellations of in-game purchases						
Verify that the platform correctly handles payment failures						
Verify that the platform correctly handles currency conversion						
Verify that the platform correctly handles automatic renewals and subscriptions						
Verify that the platform correctly handles recurring payments						
Verify that multiple users can join the same game session						
Verify that players can invite friends to join a game session						
Verify that players can join public game sessions						
Verify that players can communicate with each other through in-game chat						
Verify that players can view their and other players' game stats and leaderboards						
Verify that players can form teams and play together in team-based games						
Verify that players can challenge each other to one-on-one matches						
Verify that players can join and play in tournaments						
Verify that players can stream and share their games with others						
Verify that the platform implements proper lag and latency control						
Verify that the user can save game progress to the cloud						
Verify that users can access their saved game progress from multiple devices						
Verify that the platform implements proper backup and disaster recovery						
Verify that the platform implements proper synchronization across multiple devices						
Verify that the platform implements proper security measures						
Verify that the platform implements proper data reliability policies						
Verify that the platform implements proper data performance policies
