

Test Cases	Pre Conditions	Expected Result	Actual Result	Post Condition	Pass/Fail	Test Owner
Verify app can handle Launch and load the main screen						
Verify main screen is visible and enabled						
Navigating screen settings						
Connection with remote server and retrieve data						
Displayed data is accurate and up to date						
Handle network errors						
Save and load user preferences						
Handle low memory conditions						
Play and pause audio and video content						
Handle errors and crashes gracefully						
Handle multiple simultaneous user interactions						
Send push notifications						
Handle different input methods and keyboards						
Handle different app updates						
Handle different app states						
Handle different image and video formats						
Handle different file types and downloads						
Handle different data visualization options						
Handle different data editing and deletion options						
Handle different data-sharing options						
Handle different data searching options						
Handle data filtering and sorting options						
Handle data grouping and summarization options						
Handle data modeling and design options						
Handle data scalability and performance options						
Handle data migration and upgrading options						
Handle data monitoring and analytics options						
Handle data testing and quality assurance options						
Handle different data governance and compliance options						
Handle data backup and recovery options						
Handle data modeling and analysis options						
Handle data performance and scalability options						
Handle data import and export options						
Handle synchronization and updation options						
Data Normalization and Denormalization options						
Data Performance and Optimization options						

Handle data access and permission options						
Handle data transformation and manipulation options						
Handle data indexing and data searching options						
Handle data scalability and data performance options						
Handle different device manufacturers and models						
Handle push notifications and message alerts						
Handle app shortcuts and widgets						
Handle background tasks and services						
Handle hardware buttons and gestures						
Handle data printing options						
Handle data archiving and retention options						
Handle data recovery and disaster recovery options						
Handle data quality checks and data validation						
Handle data versioning and history options						
Handle Network conditions and Switch between WiFi and cellular						
Handle different battery levels and power states						
Handle different security settings						
Handle different app permissions						
Handle different user roles and permissions						
Handle different user accounts and logins						
Handle different payment methods and transactions						
Handle different currencies and conversion rates						
Handle data encryption and security protocols						
Handle different data pagination and filtering options						
Handle data-sorting options						
Handle data compression and decompression options						
Data validation and error handling options						
Handle data caching and optimization options						
Data security and access control options						
Handle data auditing and logging options						
Handle data governance and security options						
Handle data integration and quality options						
Handle data performance and scalability options						
Handle data governance and quality options						
Handle data migration and synchronization options						
Handle data encryption and decryption options						
Handle screen orientations						

Handle device resolutions and screen sizes						
Handle operating system versions						
Handle different browser and webview functionality						
Handle data integration and API options						
Handle different languages and localization						
Handle different system dates and times						
Handle different time zones						
Handle different map and location services						
Handle different device sensors						
Handle data warehousing and mining options						
Handle data merging and splitting options						
Handle data replication and redundancy options						
Handle data replication and mirroring options						
Handle data warehousing and mart options						
Handle accessibility options and settings						
Handle voice commands and speech recognition						
Handle biometric authentication methods						
Handle network protocols and ports
